# PAIR TRADING

## Algorithmic and program trading

Pair Trading – algorithmic and program trading V.15.7.5 is a useful real-time algorithmic and program trading system used as a pair trading strategy in stocks.

This trading tool, as the name suggests, is a complete auto piloted system that can be used without any human intervention. You can just leave the system running and the program will continue trading in accordance to the price of the stocks based on the custom build signals.

This is a Pairs Trading Strategy system for Microsoft Excel 2007 for execution on the Interactive Brokers Platform through Interactive Brokers's TWS Application Programming Interface (TWS API).

We can't post the system on a server or give to everyone a demo, but we can email the program to trusted people who would like to test the system.

Pair Trading – algorithmic and program trading V.15.7.5 benefits are:

1. User friendly, extremely functional, and safe
2. Performs in Microsoft Excel environment, offering the same Excel experience and look
3. Accessible to traders of all skill levels (quite handy to work with)
4. Combines the ability to trade live (over the internet) with a Pair Trading strategy
5. Ability to open trades (multiple trades) in a single click or automatically
6. Analyze statistics
7. Box-language for coding your own triggers and signals
8. Alerts and others automatic features

How to install the program and get started is explained in the “Installation” section.

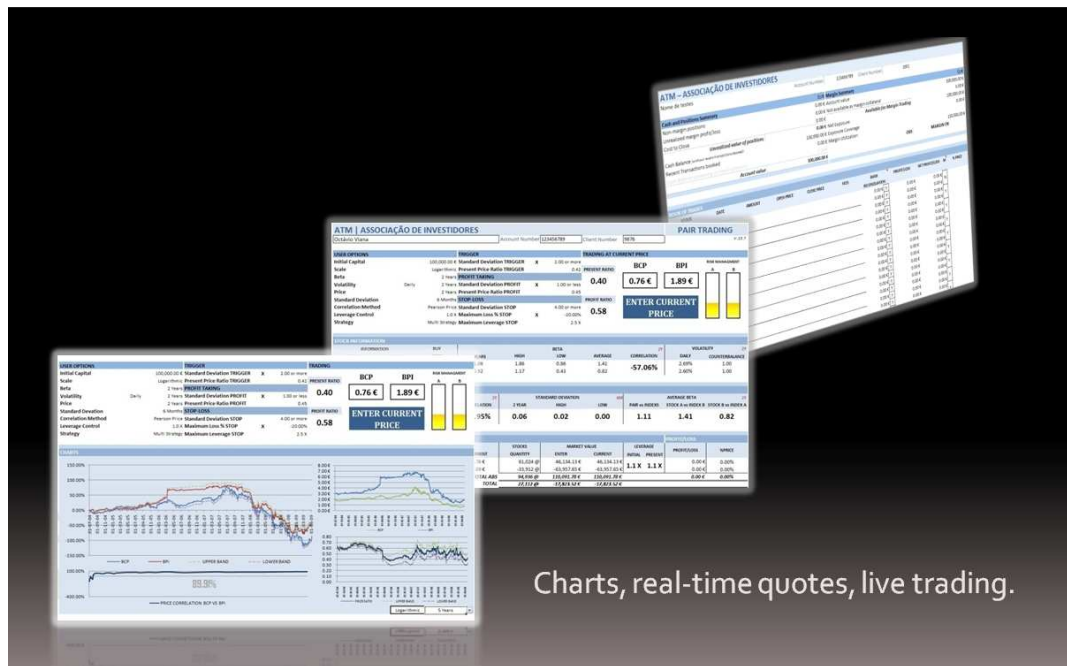

The application's dialogs are explained in the “Using the program” section.

How to trade is explained in the “Starting trade” section.

For any questions, please refer to <http://www.investorassociation.eu>

For any suggestions contact [info@investorassociation.eu](mailto:info@investorassociation.eu)

Charts, real-time quotes, live trading.

### Requirements:

Intel Core 2 Duo 3.16 GHz processor or equivalent AMD processor or fast processor

4 Gigabytes (GB) of Memory (RAM) or higher

4 Megabytes (MB) free Hard Disk space.

Monitor, 256 colors, 1280x1024

Microsoft Windows XP or Microsoft Windows Vista

Microsoft Excel 2007

High speed internet (20 MBS) or better

## Installation

### To install Pairs Trading – algorithmic and program trading V. 15.7.5.

In order to use “Pairs Trading – Algorithmic and program trading”, the IB’S API must be installed and IB’S TWS must be running.

#### To install the IB’S API:

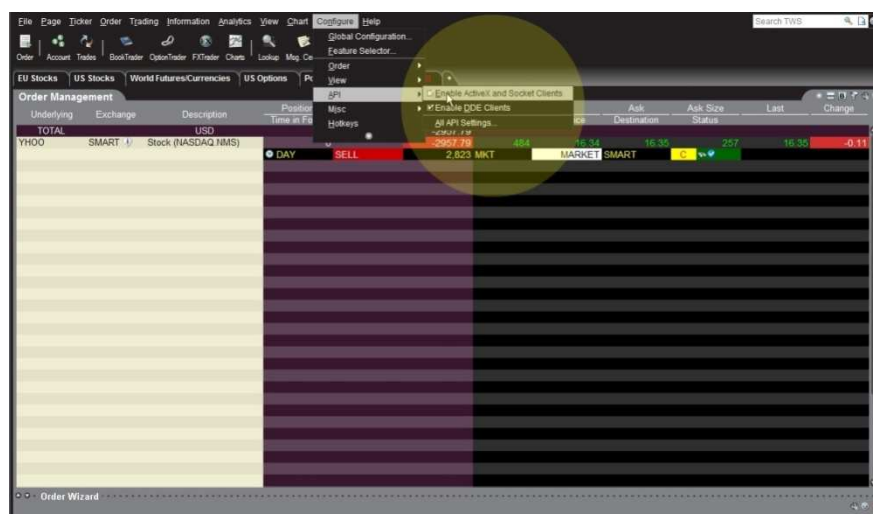

1. Download the file from [www.interactivebrokers.com/en/p.php?f=programInterface&ib\\_entity=llc](http://www.interactivebrokers.com/en/p.php?f=programInterface&ib_entity=llc) (Proprietary Tab) and save the file to your hard drive.
2. Double-click the **InstallAX\_962.exe** program file on your hard disk to start the installation program.
3. Follow the instructions on the screen to complete the installation.

#### To enable IB’S API on IB’s TWS.

1. Open the IB’s TWS and Login (to log in double-click the TWS icon on your desktop, enter your username and password, and **click Login**)

2. On the Tool Bar, click on **Configure** tab, and choose **API**.
3. Mark the box labeled **Enable ActiveX and Socket Clients**

## Install and start the Pair Trading V. 15. 7:

Once you have installed and enabled the IB's API on IB's TWS:

1. You must use a file-unzipping program to unzip **Pair Trading** file. If you already have a utility to unzip the file, please proceed to next step, if not, you can download an unzip program from [www.7-zip.org](http://www.7-zip.org)
2. **Unzipped the Pair Trading files.** You can do this by right clicking in the zipped file and **click Extract**.
3. Open the unzip **Pair Trading folder** by double clicking on it and:
  - 3.1. **Double click *Pair Trading V. 15.7 datafeedIB*** to open the worksheet in Microsoft Excel 2007, go to **Security Alert** options, and when prompted, **click to enable *Macros***.

- 3.2. **Double click *Pair Trading V. 15.7 - AUTO*** to open the worksheet in Microsoft Excel 2007, go to **Security Alert** options, and when prompted, **click to enable *Macros & ActiveX* and *embedded links***

At this point, the Pair Trading system is ready to use.

## Using the program

### Real Time DataFeed

1- In the **Market Depth** sheet fill **User Name** and **Refresh Data**, then click **Create Pair** button.

Fill in USER NAME and REFRESH DATA, then click Create Pair button.

Note: The refresh rate is measured in nano-seconds (millionths of a second)6

2- Input the request information in the **popup box**, then click **OK** to create the pair.

Enter each symbol you want to trade in an individual field next to symbol, and enter type, exchange and currency for each "leg". Click OK and it will create the pair.

16 de Agosto de 2009

3- Ask for data feed selecting the security ticker ("leg" A) and requesting **Market Depth** and **Market Data**.

[illegible]

Select again the security ticker, once there click Request Market Data

# PAIR

4- Repeat the same procedure with the other “leg”.

When the quotes and market depth request has been submitted successfully, the market depth screen will return the real time quotes and market depth.

Note 2: If you don't know a company's ticker symbol, you can find it in Yahoo! Finance using their "symbol lookup" function.

## User Options

The Pair Trading system includes a flexible user options to customize the trading rules depending on the time frame, scale, leverage, strategy, trigger, stop loss, etc.

The screenshot displays the ATM | ASSOCIAÇÃO DE INVESTIDORES PAIR TRADING interface. It includes fields for Account Number (12345) and Client Number (9876). The interface is divided into several sections: USER OPTIONS, TRIGGER, TRADING AT CURRENT PRICE, and RISK MANAGEMENT. The USER OPTIONS section includes settings for Initial Capital (100,000.00 €), Scale (Logarithmic), Beta (1 Year), Volatility (Daily), Price (Standard Deviation), Correlation Method (Pearson Price), Leverage Control (1.0 X), and Strategy (Multi Strategy). The TRIGGER section includes settings for Standard Deviation TRIGGER (X 2.00 or more), Present Price Ratio TRIGGER (30.52), and Profit Taking (1 Year Standard Deviation PROFIT X 1.00 or less). The TRADING AT CURRENT PRICE section shows the current price ratio (30.50) and the current price of the pair (521.790 and 17.110). The RISK MANAGEMENT section includes a 'BUY' button and a 'STOCK ACCOUNT' button. The TRADING INFORMATION section shows a table with columns for STOCK NAME, POSITION, PRICE, CURRENT, STOCKS QUANTITY, MARKET VALUE, LEVERAGE, and PROFIT/LOSS. The table shows data for GOOG and YHOO, with a total profit/loss of 0.00 €.

STOCK NAME	POSITION	PRICE	CURRENT	STOCKS QUANTITY	MARKET VALUE	LEVERAGE	PROFIT/LOSS
GOOG	SHORT	ENTER	521.81 €	-94 @	-49,116.28 €	1.0 X	0.00 €
YHOO	LONG	ENTER	17.10 €	2,763 @	47,244.50 €	1.0 X	0.00 €
TOTAL ABS				2,857 @	96,360.77 €		
TOTAL				2,669 @	-1,871.78 €		

**Initial Capital:** The amount of money allocated to this particular strategy. (Recommended minimum 10k)

**Scale:** You can choose between nominal or logarithmic scale. (Recommended logarithmic to the long periods)

**Beta:** The relation of security returns with market as a whole (index). You can choose from 1 month until 5 years.

**Volatility:** Standard Deviation of compounded returns of a security to a specific time frame. You can choose from 2 weeks until 5 years, and daily, monthly or annually.

**Price:** Close price - daily. You can choose from 2 weeks until 5 years.

**Standard Deviation:** Is the variability of the price ratio. A pair with a high STD is more profitable but is considered more risky.

**Correlation Method:** You can choose between Pearson (price), Pearson (returns), and Spearman correlation coefficients.

**Leverage Control:** You can control the amount of debt used in the trade. More leverage increase the returns (maximizing the gains or losses).

**Strategy:** The strategy is the Pair Trading's "secret sauce". You can choose between six market strategies.

**Trigger:** Is an event that triggers market entry, based on STD or Price Ratio signal.

**Profit Taking:** Is an event that triggers market exit (with profit), based on STD or Price Ratio signal.

**Stop Loss:** Is an event that triggers market exit (with loss) to limit losses, based on STD, Price Ratio or Percentage Loss signal.

## Statistics

Once you have your indicators, triggers, and time frames selected, you have an easy way to analyze the pair. The price statistics, on the **Statistics** sheet, provide that easy way to measure various characteristics of the pair, namely the correlation, volatility, Beta, etc.

The most important statistics are highlighted.

**Price correlation:** More price correlation better is the pair to trade. 90% of correlation is liked

**Average ratio:** If your input to trigger (market entry or exit) is the Price Ratio, you need this average price ratio.

**Standard Deviation:** A pair with a high STD is more profitable but is considered more risky

**Beta:** A pair with similar betas is better. Betas greater than 1 may allow to trade more frequently.

**Beta Correlation:** More Beta correlation better is the pair to trade.

**Volatility:** If you are a day trader, the daily volatility can be a good indicator for your perceptual stop loss limit, the same for other time frame.

## Charts

Sometimes complex statistics and data make more sense when you have a visual representation, because charts can help you to visualize the completed picture of the pair correlations. In the **Chart** sheet you can find some statistics charts.

In this sheet you can monitor the quotes of the chosen pair (market depth – prices available bid and ask quantities) and transmit the “basket” order with a single click when you get (or not) the signal to trade.

The “basket order” gives you the facility to trade the pair as a package (buy one leg and sell other) in nano seconds. When you fire the “basket order”, you are automatically redirected to **the Orders Confirmations** sheet where you can see the progress of your “basket order” and received alerts from TWS.

Demo System - DU15186 - Interactive Brokers Trader Workstation

Shares for this order are not immediately available for short sale. The order will be held while we attempt to locate the shares.

☐ Don't display this message again. **OK**

The screenshot shows the Pairs Trading System interface. Callout 1 points to the 'MSFT YHOO' section with bid/ask prices and a green 'BUY' button. Callout 2 points to the 'Market Depth' table for MSFT and YHOO. Callout 3 points to the 'TRADING AT CURRENT PRICE' section showing the present ratio (1.01) and profit ratio (1.44), with a 'WAIT TO TRADE' button. Callout 4 points to the 'STOCK ACCOUNT' section showing the current stock value and a 'MANUAL TRADING' button.

1. Execute a Buy Order to the “basket” (pair) simply by clicking the **BUY** button (in green color) and your “basket order” is submitted directly to Interactive Brokers TWS. You will create an order to buy one leg at the asking price for the quantity shown in the ask price window and at the same time you will create another offer for the other leg, to sell at bid price the quantity shown in the bid price window. When the pair is open, the green button (**BUY**) changes to red and turns to **SELL**, and you can close the pair, executing a Sell. Your basket order is submitted to Interactive Brokers TWS at ask and bid price to the leg to sell and to the leg to buy respectively. The quantity of each leg is the same quantity you bought and sell in that order.

To deactivate a pending order you just need to click on **BUY WAIT** or **SELL WAIT** button which is show in BUY or SELL button place while the system is waiting to fill the “basket order”.

This “basket orders” are not “combo legs”. If you reprogram the system to executed “combo legs” (you need reprogram in VBA language) the Interactive Brokers SmartRouting guarantees best execution for each leg and entire order, with Interactive brokers taking the risk for partially executed orders.

2. In this window you can view the prices available bid and ask quantities (market depth) in real time. In the blue boxes of this window you can choose the type of order you want.

**Limit Order**- Limit Order is an order with price limit. In other words, is an order to buy or sell a set quantity of securities at a specified price or below.

**FOK Order** – Fill or Kill order is an order to fill a set quantity of securities at a specified price immediately and must be complete filled or killed (cancel). Is a simple limit order to execute immediately or, if not, is cancel.

**Market Order** – Market Order is an order to fill a set quantity of securities at the best available price. When you select Market Order the system will show you a blue rectangle where you can choose “**protect market order**” or “**unprotect market order**”. If you select “**protect market order**” your other will be killed (cancel) if the first five available bid/ask quantities didn't fill your order completed.

**Average Price** - Average Price is not an order. The average price provides the information about the compounded average price for the five available bid/ask quantities.

**3.** This window is your trading signal box where you get the information to trade (buy or sell) the pair. Additional shows a chart (two bars) with the impact of each “leg” in the current (Profit/Loss) Pair.

**4.** In this window you get the trades and orders confirmations for the last trade of current pair. You use the blue box below to choose in which account you want record the trade (stock account or margin account). You can choose for manual, semi auto or auto trading.

**Manual trading** – You can buy and sell the pair clicking in the execution button (box 1).

**Semi Auto Trading** – The system automatically buys and sells the pair, running and executing the trade (buy pair and sell pair) only once. When the trade is close, the system turn to standby mode awaiting authorization to begin a new trade.

**Auto Trading** – The system automatically runs and executes the trades (buy and sell pair) continuously. It doesn't require human intervention, but is better a human monitor the system continuously... If you don't want continuously monitor the system, you better learn to pray.

## Account

### Summary Account

The **Summary Account** shows you the real time account balance, net margin available for trading, non-margin position not booked, unrealized margin profit/loss, cost to close, recent transition booked, net exposure, exposure coverage, market value of your open orders (current Pair Trading portfolio), etc.

---

### TRADE IN LIQUID AND ACTIVE MARKETS

Trade in liquid and active markets (special in short-term) where you can move in and out ease.

### REWARD TO RISK

Watch for a reward-to-risk ratio at least of 2:1. You must stipulate a confidence level according the risk-to-reward and allocate capital as this confidence level. If you have a higher reward-to-risk your confidence level is higher too and you can allocate more capital in that trade.

### FIXED-PERCENTAGE BET

If you use a fixed-percentage bet you are automatic decrease the allocated capital when you loss and consequential reduce the futures loss; and increase the allocate capital when you win and consequential you have an exponential growth.

### LIMIT LOSSES

As soon as position is initiated, you should have a stop loss. Stops may be used to limit losses and protect profits. Stop orders must be placed in appropriate relation to the reason to enter in trade, outside of the price range determined by the volatility and far enough if stop you to know that you were wrong, avoiding getting stopped out by the normal "noise" of the market. If the original reason for entering the trade may no longer be valid, get out. Mental stops do not work.

### WHEN IN DOUBT, GET OUT

If the market doesn't move immediately in the way of your Pair, then there's no need to remain in the pair. In most cases you are better out of position and waiting for the market move to jump in again. Off course you need give time to the things happen (your time frame) but always use a time stop.

### WATCH FOR A GOOD PAIR

Choose a highly correlating pair and that this correlation makes sense. Don't get in and out every time trying to catch a good chance. Wait for the good buying /selling opportunities. If you lose an opportunity don't force a trade, the market will continue to be there give you new opportunities.

### REMAIN CONSISTENT

Find a formula (user options) that works for you, test and back testing consecutively and stick to it. You have to be disciplined and respect the trading plan integrally.

### STOP TRADING AND RE-EVALUATE

Consider the impact of losing money in your capacity to analyze the next trade. If you have consecutive losses get out and re-evaluate what you are doing wrong, the market will still be there once you have a new plan of action.
